

Lewis & Clark County Landfill – Landfill Operations Engineer RFQ

Response to RFQ Questions

1. Life of Class IV cell? The cell was opened in 2004 and has taken in 51,000/tons. It has not been surveyed for life expectancy but the estimated life remaining in the current cell is 5 to 8 years depending on tonnage.
2. Long-term plan on methane extraction for Class II cells? The landfill is not currently producing methane, so a long-term plan has not been developed.
3. Has Phase I and II reached garbage height? Once Phase IV reaches capacity all four phases (Phase I, II, III and IV) will have a 60-foot vertical expansion added across the top, then all four phases will be closed with final cover.
4. Who excavated Class IV? Unknown. In the past five years landfill staff have excavated Class IV expansions.

\*Note: Due to Covid-19 the proposal review date is tentative. Lewis & Clark County Public Works office is closed through Friday, October 16<sup>th</sup> and will reopen Monday, October 19<sup>th</sup>
